

Reid Fruits Nursery is now taking orders for your 2023 plantings

Reid Fruits has been operating its own nursery since 2002 to provide both cherry and apple trees to exacting standards and to meet the companies own demand for expansion and renovation.

Reid Fruits is proud to be able to offer a range of virus tested cherry varieties including **TAMARA™**, **Kordia**, **Lapin**, **Simone**, **Regina** ..

Available on the following rootstocks - **Stallion**, **GiSela® 12 Gi1592(S)**, **GiSela® 13 Gi14813(S)** **GiSela® 17 Gi31817(S)**

In addition to traditional bare-rooted trees for winter / spring delivery, the availability of tissue cultured tube stocks has provided the opportunity to now grow trees above ground hydroponically using the ELLEPOT™ system. This means that in the future 'green' trees can be supplied without disturbing roots to allow planting and settling in before dormancy with the aim of reducing replant shock and improving establishment in spring.

Reid Fruits has many global partners and over the next few years expect to offer more exciting new cherry varieties that are currently undergoing testing and will be able to supply a wider range of rootstocks including **GiSela® 3 Gi2091(S)**, **GiSela® 5 Gi1482(S)**, **GiSela® 6 Gi1481(S)**, **PIKU 1®** and **Wavit® Prudom(S)**
